

CBD Formulas

Notes on usage

Transformation's THC free Protease-CBD was formulated to create a feeling of well-being. The ingredients in this formulation work synergistically to help calm the autonomic nervous system and support overall systemic health. This exclusive formulation integrates the regulatory system of the endocannabinoid system, properties of proteolytic enzymes in enhancing blood rheology and optimizing receptor-ligand interactions, and nutritive and health benefits of moringa. These ingredients work synergistically to help restore and/or maintain homeostasis.

General Indications

The Endocannabinoid system is a key regulatory system that modulates several bio-physiological functions in the body. More specifically, this system helps to control appetite, manage pain, control inflammation, modulate pleasure, support the immune function, control excess cortisol production, manage depression (and other mood disorders), enhance memory and learning ability, support the reproductive function, and other functions. Possible indications include:

- Weakened or challenged immune system
- Stress/anxiety
- Intestinal Permeability
- Dysbiosis
- Pain
- Improved sleep
- Depression
- Neurological disorders
- Inflammation
- Epilepsy
- Cognition
- Movement Disorders

General Information

- If upregulation of COX-2 is of concern in dysfunction when applying phytocannabinoids such as CBD, one should consider combining with proteolytic enzymes.
- CBD has poor water solubility, therefore poor absorption. Systemic exposure to CBD is increased four-fold by ingestion with a high-fat meal. For optimal absorption take with digestive at mealtimes.
- There's no conclusive evidence that shows whether taking CBD during pregnancy is or isn't safe. It is the practitioner's discretion to use this product in patients who are pregnant or nursing.

Dosing

- When dosing patients with CBD a "start low and go slow" approach, is best.
- In general, herbs are not recommended during pregnancy/lactation or for children 12 years or younger. However, each case should be assessed on an individual basis and the practitioner, along with the patient, may use their professional judgment and decide to use the formulas.
- The recommended usage listed on the bottles is maintenance dosage. For therapeutic dosage, more may be taken based on need.

PROTEASE-CBD

WITH MORINGA

Transformation's NEW
enzyme-delivered CBD
formula with moringa

The “homeostatic-modulating trio” of cannabidiol, moringa, and enzymes in this formulation work synergistically to help calm the autonomic nervous system, support overall systemic health, and create a feeling of well-being.

Product Highlights

- All natural antioxidant, anti-inflammatory herb
- Proteolytic enzymes for improved delivery and systemic benefits
- Supports the endogenous Endocannabinoid System (ECS) for systemic health

SUPPLEMENT FACTS		
Serving Size 1 Capsule		
Amount Per Serving		% Daily Value
Moringa leaf powder (<i>Moringa oleifera</i>)	150 mg	*
Tzyme™ Protease Blend (peptidases, bromelain)	100 mg	*
CBD isolate	50 mg	*
* Daily Value not established		

Other Ingredients: Vegetable Capsule (Hypromellose)

Clinical Applications

- Mood support
- Cognition
- Nervous system support
- Pain
- Improved Sleep

In general, herbal formulas are not recommended during pregnancy and lactation or for children 12 years or younger. Each case should be assessed on an individual basis and the practitioner, along with the patient, may use their professional judgment and decide to use it.

For Your Information

- Cannabidiol isolate is the purest form of CBD, free of the THC and other cannabis compounds present in full-spectrum CBD
- Moringa has been praised for thousands of years for its high nutritive properties—the leaves of this “miracle tree” are a superfood rich in amino acids, phytonutrients, vitamins, and minerals that has been shown to help support the cardiovascular and respiratory systems, control mood disorders, modulate inflammation, promote protease homeostasis, maintain blood sugars, improve vision, and encourage healthy kidney function, etc
- Enzymes maximize delivery of the ingredients and the body’s response through improved blood flow, enhancement of CBD receptors, reduced risk of free radicals, and regulation of inflammatory markers

Dosage

- 1 capsule once daily with at least 8 oz. of water.
- As cannabinoids are lipophilic and therefore lipid soluble, take with a fatty meal for best results
- After a week, additional capsules may gradually be added to the dosage as needed (“start low and go slow”)
- CBD is extensively metabolized in the liver by the cytochrome P450 (CYP) enzyme system which plays a large role in CBD’s potential drug interactions—review existing medications and separate from CBD by four or more hours, carefully observing the patient for desired and adverse effects
