

Enzyme Therapy FAQ's

Instructions for administering digestive enzymes with a **Feeding Tube**

Recommended protocol:

- 1 capsule Transformation Professional Protocol™ **Digest**
- 1 capsule Transformation Professional Protocol™ **Protease**

Open capsules and mix in 20-30 cc water – enough water to make a loose slurry.

Each enzyme “slurry” mixture should be given immediately after mixing. Insert via syringe into feeding tube and flush tube with water.

If feeding is continuous: administer the capsules 4-6 x day with periodic flushes of water, usually every 4 hours.

If bolus feedings: administer the capsules at the beginning of each bolus feeding, usually every 4 hours, or 6 x day.

At bedtime, or as it coincides with enzyme dosage in the pm, administer:

- 1-2 capsules Transformation Professional Protocol™ **Probiotic**
